

Week	Tuesday	Thursday
2 Feb 4-8	Functional vs. imperative programming languages Functions, lambda functions, functional forms Side effects and referential transparency LISP lists and data representation ceclnx01.cec.miamioh.edu <ul style="list-style-type: none"> • bash reference (might need to be on-campus) • See ~zmudam/CSE465-565/readme • cp -r ~zmudam/CSE465-565/ . basics.scm <ul style="list-style-type: none"> • Arithmetic expressions • Function definitions • Conditionals - if and cond Readings: Sections 15.1-15.5, notebook pages 1-11	Quiz #1 on Tue Feb 12 <ul style="list-style-type: none"> • Chapter 1 - 35% • Chapter 2 - 20% • Chapter 15.1-15.5 - 45% conditionals quote car, cdr caddr, cadaar, cons, list, append recursion as control structure for repetition list.scm
1 Jan 28-Feb 1	Canvas and Google Docs Syllabus Course notebook Chapter 1 <ul style="list-style-type: none"> • Compiled vs interpreted languages Criteria for evaluation of language features Homework #1 (due Mon Feb 11 11:59pm) Readings: Chapter 1	Need course notebook next week (or first 11 pages) Any questions on homework #1? Chapter 1 (continued) Language survey Short history of PLs (author's slides) <ul style="list-style-type: none"> • Evolution of programming languages Readings: Chapter 2
IGNORE STUFF BELOW. STAGING AREA FOR FUTURE CLASSES		
3 Feb 11-15	Quiz #1 mystery.scm equal.scm <ul style="list-style-type: none"> • =, EQ?, EQUAL?, EQV? Discuss Homework #2	tail.scm code.scm <ul style="list-style-type: none"> • eval, apply, lambda, map • eval <ul style="list-style-type: none"> ◦ (interaction-environment) lnx01 ◦ user-initial-environment mit • On lnx01, need: <ul style="list-style-type: none"> ◦ ,open random

		imperative.scm <ul style="list-style-type: none"> Imperative features in Scheme Questions on HW2?
14 May 1	Final exam topics (topics finalized on Wednesday) Semantics <ul style="list-style-type: none"> Denotational semantics (75-76) Operational semantics Axiomatic semantics Readings: Section 3.5	Semantics <ul style="list-style-type: none"> Axiomatic semantics HW5 not graded yet <ul style="list-style-type: none"> Test cases (FYI) Review for final exam <ul style="list-style-type: none"> Email me request to switch exam dates
13 Apr 24	Quiz #5 <ul style="list-style-type: none"> IEnumerable/IEnumerator Chapter 9 Grammars Discuss Homework #6 Ambiguity continued (73) Describing Syntax <ul style="list-style-type: none"> Conveniences of {} and [] Sample Grammars <ul style="list-style-type: none"> Java SQL Pascal grammar (70-71, 72) Attribute grammar (74) Readings: Section 3.4	Quiz 5 Post-semester outcomes survey <ul style="list-style-type: none"> Complete before Fri May 5 11:59pm. Part of HW6 Semantics <ul style="list-style-type: none"> Denotational semantics (75-76) Operational semantics Axiomatic semantics Readings: Section 3.5
12 Apr 17	Subprograms/funcions <ul style="list-style-type: none"> Procedures, functions, subprograms, and Methods Compare with yield statement (59) Call by value, reference, value-result, name C++, Java, Python, C# revisited (63) Named parameters and default parameters (62) <ul style="list-style-type: none"> pythonNamedParameters.py Variadic functions - varargs. {cpp, py, cs, java} 	Functional tools in imperative languages (46-50) <ul style="list-style-type: none"> Python lambda expressions, map C# delegates, select, where C++ lambda expressions Closures and Coroutines (author Chp. 9 slides 46-52) Javascript example (67) Describing Syntax <ul style="list-style-type: none"> Grammars/BNF Derivations and parse trees (73)

	(68-69) <ul style="list-style-type: none"> • Generics/templates <ul style="list-style-type: none"> ◦ C# samples • Macros (64) Readings: Chapter 9	<ul style="list-style-type: none"> • Ambiguity (73)
11 Apr 10	Quiz #4 <ul style="list-style-type: none"> • C++ pointers and dynamic memory • Smart pointers • Using dynamic memory within class definition • Array access functions Data Types <ul style="list-style-type: none"> • Subranges • Associative arrays • C union - union.cpp • Type checking, strong type checking Expressions and assignment statements <ul style="list-style-type: none"> • Precedence and associativity • Evaluation order • Side effects • Operator overloading • Narrowing, widening conversions, casting (56-57) • Boolean expressions, short circuiting • Compound assignment, unary assignment • Assignment as an expressions Readings: Chapter 6 & 7	Quiz #4 Statement-level control structures <ul style="list-style-type: none"> • C# enumeration (58-59) • C++ iterators (60-61) • if () <ul style="list-style-type: none"> if () else • Switch C++, C#, Ada • Logically controlled loops • Traditional counter controlled loop • Goto • break and continue Subprograms/functions <ul style="list-style-type: none"> • Multi-dimensional arrays in C++ <ul style="list-style-type: none"> ◦ void f(int mat[50][100]) vs ◦ void f(int mat[][100]) vs ◦ void f(int mat[50][]) Readings: Chapters 8 & 9
10 Apr 3	Smart pointers in C++ (42) <ul style="list-style-type: none"> ◦ smartPtr.cpp ◦ unique_ptr and shared_ptr C++ class definitions and memory management <ul style="list-style-type: none"> • mystring.h and main.cpp (43-45) • -fno-elide-constructors compile option Data types <ul style="list-style-type: none"> • Multi-dimensional arrays, row major vs column major layout Readings: Chapter 6	Data types <ul style="list-style-type: none"> • Arrays, slices, addressing <ul style="list-style-type: none"> ◦ Revisit Arrays.cs (55) • Reflection.cs (53-54) • Managing the heap Discuss Homework #5

<p>9 Mar 27</p>	<p>Quiz #3 on Wednesday</p> <ul style="list-style-type: none"> • C# • Static/dynamic scope • Chapter 5 <p>Dynamic/static scope review</p> <ul style="list-style-type: none"> • Referencing Environment • Python scoping (52) <p>Names, bindings, type checking, scopes Static, stack dynamic, heap variables Lifetime</p> <p>PointersAndMemoryExamples.docx (37)</p>	<p>Quiz #3</p> <p>ptr2.cpp (38-39) Memory allocation problems in C++ (memory.cpp 40-41)</p> <ul style="list-style-type: none"> • Lost memory • Dangling pointers • Deallocating item instead of array of items • Deallocating incorrect memory • Array overruns <p>Heap diagnostic tool -- valgrind (~zmudam/lang/readme)</p>
<p>Spring Break</p>	<p>No class.</p>	<p>No class.</p>
<p>8 Mar 13</p>	<p>No class due to instructor illness.</p>	<p>Office hours canceled for today Discuss Homework #4 DataStructures - DataStructures.cs, complex.cs</p> <ul style="list-style-type: none"> • List • Sets • Dictionary • Properties • Templates/generics • Classes <p>Static & dynamic scoping Scope -- scope.py scope.js rhino Javascript implementation</p> <p>Readings: Chapter 5</p>
	<p>Midterm exam</p>	<p>Review exam Homework #4 to be distributed next week. C#</p> <ul style="list-style-type: none"> • C# reference manual • C# API reference • Safari references (links work on campus) <ul style="list-style-type: none"> ◦ Essential C# 6.0

<p>7 Mar 6</p>		<ul style="list-style-type: none"> ○ C# 6.0 in a Nutshell <p>Arrays - arrays.cs</p> <ul style="list-style-type: none"> • Compiling ceclnx01 & MS VS • Overview, syntax, basic output • [][] vs [,] • switch/case statement <p>ParameterPassing - ParamsAndEnums.cs</p> <ul style="list-style-type: none"> • Parameter passing modes - in, out, and ref <p>NamespaceClassAndStruct - NamespaceClassAndStruct.cs</p> <ul style="list-style-type: none"> • Namespaces • struct vs. class
<p>6 Feb 27</p>	<p>Logic and logic programming Python 3.6</p> <ul style="list-style-type: none"> • Python reference manual • Python API • Safari references <ul style="list-style-type: none"> ○ Introducing Python ○ Learning Python <p>Python basics First.py Python collection classes</p> <ul style="list-style-type: none"> • Lists, indexing • Dictionary • Set 	<p>Midterm exam on Mon Mar 6 Uninstantiation of Prolog variables when failure occurs Python continued</p> <ul style="list-style-type: none"> • fraction.py, problem.py, main.py • io.py • listComp.py • List comprehensions • In-class: define Bag class
<p>5 Feb 20</p>	<p>Quiz #2 Prolog continued prolog on ceclnx01</p> <ul style="list-style-type: none"> • <code>not (X=Y) vs X \= Y</code> • <code>not (P(X)) vs \+ P(X)</code> <p>list.pl</p> <ul style="list-style-type: none"> • length built-in • [H T], [H1,H2 T] • reverse trace • append trace <p>trace and notrace</p>	<p>Office hours on Friday noon-1:00 kth parse.pl cut.pl game.pl Discuss Homework #3 Prolog practice</p> <ul style="list-style-type: none"> • <code>sum(L, S)</code> ✓ • <code>max(LST, E)</code> ✓ • <code>lastElement(L, E)</code> ✓ • <code>nextToLast(LST, E)</code> • <code>kth(K, LST, E)</code> ✓

		<ul style="list-style-type: none"> • zip(L1, L2, Z)
<p>4 Feb 13</p>	<p>HW1 notes List representation Prolog</p> <ul style="list-style-type: none"> • basics.pl • relatives.pl <p>Software</p> <ul style="list-style-type: none"> • cec1nx01 - gprolog • SWI-Prolog <p>Readings: Chapter 16</p>	<p>HW2 - getOrder should return first one, if there are multiples Quiz #2 on Monday</p> <ul style="list-style-type: none"> • Scheme 30% <ul style="list-style-type: none"> ◦ apply, eval, lambda, map ◦ tail recursion • Prolog 70% <ul style="list-style-type: none"> ◦ Reading Prolog and evaluating queries ◦ Writing Prolog ◦ List processing <p>Prolog</p> <ul style="list-style-type: none"> • relatives.pl <ul style="list-style-type: none"> ◦ review uncle and uncle2 (relatives2.pl) ◦ ancestor trace • speed.pl <ul style="list-style-type: none"> ◦ arithmetic • list.pl • [H T], [H1,H2 T], length built-in • Write: sum(L, S), lastElement(L, E), nextToLast(L, E), kth(K, L, E) • reverse trace • append trace
<p>Final Exam Week</p>	<p>8:30 section - Tue May 14 8:00-10:00 1:15 section - Tue May 14 12:45-2:45</p>	<p>Office hours for exam week Mon - 1:00-2:00 Tue - 3:00-4:00 Wed - none Thr - none Fri - none</p>
